I have a situation where I want to be able to add a character (such as a dollar sign) to a user's password in Firebase. My app requires a minimum password length of 6, and a maximum password length of 14. I have this functionality in place, but I'd like to allow users to add a dollar sign to their passwords, if they wish. Is it possible to somehow add a single

character to a user's password? A: Firebase currently does not support adding characters to user passwords, but there is a pull request for this feature. You can follow the thread here for updates. Note, the user will not be notified when they change their password via the FirebaseUI if the password changes to contain an added character.
