We spoke to retired Lt. Col. Stuart Jones, former chief of staff of the U.S. Pacific Command, about the implications of the Trump Administration's latest stance toward Syria. He said: "They're seeking an outcome. They're not going to just walk into war. They're going to consider, 'What kind of outcome can we get if we take out Assad?' And I think it will be a very measured, strategic kind of approach." And, as Michael C. Shear, in the New York Times, wrote on Sunday: "To gauge the exact scope and timing of any strike, Mr. Trump will have to factor in a range of factors, including Russia's intentions and the possibility that the strike could destabilize the Middle East or affect other U.S. objectives." "And I think he's going to do that with an understanding of the facts," Jones said. Jones also said that "you're only as good as your last move," noting that the U.S. needs to decide what to do with the ISIS threat as soon as possible.Q: How to create a dynamic search query in Laravel 4 I have 3 Models with a Many To Many relationship: Event Currency Category My search page in my controller looks like this: public function index(Request $request) {
