## **Chronometer Free Registration Code Download [Mac/Win]**

Chronometer is a lightweight Windows application built specifically for helping you place a small chronometer on your screen. Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to use a chronometer on the breeze, without having to go through installation steps. It sports a clean and simplistic layout that allows you to set up the dedicated parameters with minimum effort. The program was developed with an overall simplicity in mind, so it comprises only a few configuration settings. Chronometer gives you the possibility to pause or stop the chronometer, and restart the value displayed in the primary panel with just one click. Plus, you can run multiple instances of the app. The lack of configurable settings can be good news only for rookies, as they can learn to master the entire process with just a few clicks. However, more experienced users may find it pretty inconvenient to work with a tool that doesn't offer support for advanced functions. You are not allowed to print data, copy the information to the clipboard, export the results to a file, pause the chronometer, enable multiple laps from a single interface, and customize the layout by selecting from different themes. During our testing we have noticed that Chronometer carries out a task quickly. Although it hasn't been updated for a while, no errors showed up throughout the entire process. As it would be expected from such a small utility, it remains light on system resources, so the overall performance of the computer is not affected. All things considered, Chronometer seems to be the right choice in case you are looking for a simple-to-use time management application that comes bundled with basic functions for helping you work with a chronometer.
