PMDG 737 NGX Service Pack 1 Patch.Spatial patterns of vesicular monoamine transporter 2 expression in the frontal cortex of patients with schizophrenia. Dopamine,

serotonin and norepinephrine play important roles in regulating neural development, function and behavior. Failure to regulate monoamine signaling has been implicated in the etiology of many psychiatric disorders, including schizophrenia, and there is evidence suggesting that neural system dysfunction of these neurotransmitters may be present in patients with schizophrenia. In this study, we examined vesicular monoamine transporter 2 (VMAT2) immunoreactivity (ir) in the frontal cortex of postmortem brain samples from patients with schizophrenia (n = 20) and control (n = 19) subjects. Briefly, we evaluated VMAT2-ir in the dorsolateral prefrontal cortex (DLPFC) using a multipanel immunoperoxidase procedure. There was no difference in the VMAT2-ir between the schizophrenia and control subjects. Because of the discrepancy in the findings of previous studies on 570a42141b
