- Create shortcut keys for actions like open an app, open a file, open a bookmark, search the web etc. - It's like a visual tree that lets you create shortcuts without typing a single key combination. - Create nested shortcuts to make your life easier, for example you might want to create shortcuts for navigating to certain pages or folders. - Displayed keyboard shortcuts are sorted by categories and nest with their parent shortcuts, when you hover over a shortcut it will show you it's description, but you can press F1 to get an explanation of the shortcut. - Supports modern themes and transitions. - Works in both Windows and Mac environments. - Created by Florian Stoakes How to use Shortcut Tree: 1) Browse to Shortcut Tree's icon in the Windows Start Menu (left) or the Mac Finder (right). 2) Select a category (e.g. Go) and create your first shortcut key. 3) Press the hotkey you want to use and you're done, you can use it to launch an app or search the web. 4) Select the parent shortcut and press the hotkey you want to use, or select a parent shortcut from the dropdown. 5) You can drag and drop your shortcuts between your Windows and Mac filesystem and into a folder. 6) You can remove shortcuts from your tree by selecting them in the tree and press the "X" on the keyboard, or press the trash icon to mark them for deletion in the bar below the tree. * You can change the hotkey, but you'll also need to change the key combination for your new shortcut when you don't want to use it. * You can change the transition and title text of the shortcuts, but not the descriptions. * File names do not matter - they are just a name used to identify the shortcut. 6. Restart and enjoy. 7) If you want to change the hotkey of a shortcut, navigate to it in the tree and press F1 to see the description and the key combination you want to use. With shortcut you can handle the work even more easily. This is my new favorite app in the beginning. You can surely create (not necessarily) shortcuts for every action to which you want. And as each of your shortcuts is in his own folder, they disappear when you close the main window. - The application is not that easy-to-use
