History of AutoCAD AutoCAD originated from a departmental needs assessment done at a design consulting firm named Waddell and Associates in 1982. The firm was founded by Richard Waddell and Herb Baetz. The assessment took place when Richard and Herb saw several of their design colleagues in trouble as they tried to communicate their design ideas to other people. Waddell and Baetz found out that using paper and pens was not effective, and that many of their colleagues were working on drawings that they could not effectively communicate to others. The departmental needs assessment was done in a basement room at Autodesk's Palo Alto, California, headquarters, called the "coworking" room. The basement room had been designed to accommodate several small groups working on various software projects. During the design consultation, a group of AutoCAD users began to meet on a daily basis to find a solution to the aforementioned problem. They met in a round table format. During their brainstorming sessions, the team realized that they could not generate enough drawings to effectively communicate design ideas and concepts. At the time, the company was developing a new commercial CAD program. Based on their team's problem-solving process, they created a new product in the late 1980s. AutoCAD was launched in December 1982. AutoCAD: First Generation Early work on AutoCAD began in February 1982. After the design consulting firm's brainstorming sessions in the basement room, a team of about a dozen people began designing AutoCAD. These people included Jeff Wicks, co-founder of Autodesk; Richard Waddell; Herb Baetz, AutoCAD's lead designer; Rich Adams, design engineer; Chris Wessells, product manager; and several engineers and technicians. Richard Waddell proposed to co-found Autodesk and started the company's first office. The basement room was converted into a drafting studio where the original AutoCAD project team worked on the first version of AutoCAD. In January 1983, Richard Waddell left Autodesk to pursue other opportunities, and Herb Baetz, the lead AutoCAD designer, assumed control of the project team. Autodesk, Inc. The new product was named AutoCAD, short for Automatic Computer-Aided Drafting. The product was originally released for the Apple Macintosh II computer. This was a full-featured desktop computer that competed with the Apple

AutoLISP is a language based on LISP that runs on top of the AutoLISP engine in AutoCAD. AutoLISP is both used to write add-ons and extend AutoCAD. Visual LISP is an object-oriented scripting language, which enables the creation of graphical and computational macros. In 2007, AutoLISP and Visual LISP were deprecated, and replaced with VBA. VBA can be used for tasks such as adding fields, work orders, and tools, as well as automating various tasks in AutoCAD. VBA is included in AutoCAD. Visual Basic is a general-purpose development environment built on the Microsoft Visual C++.NET Framework. It is available for all Microsoft Windows operating systems. A VBA add-on called Visual LISP can be used to create macros. However, Visual LISP is generally not used for automating. NET is used to connect to external systems using COM and .NET. .NET was released for AutoCAD in 2004 and is available for Windows operating systems. In 2009, .NET was deprecated in favor of ObjectARX. ObjectARX uses .NET as a scripting language. It also uses COM for connecting to external systems. History AutoCAD started in the 1970s as a drawing program for the HP 5150 Workstation. Originally it was created by George Beeler as Autodesk I, and then Autodesk II. Autodesk wrote Autocad for the MS-DOS operating system and renamed it Autodesk AutoCAD. With the release of AutoCAD LT in 1997, Autodesk released the source code for AutoCAD under the GNU General Public License. Autodesk continued to work on AutoCAD and released the first release of AutoCAD 2004 for the Windows operating system. This version included many new features. The next release, AutoCAD 2005, included a new ribbon, object snaps, and the ability to view CAD files in Google Earth.
