===== Visual Schema is an ER Diagram creating tool that uses SQL files as a starting point. The software supports various file formats of the SQL dialect such as Oracle, MSSQL, MySQL and MS Access. The resulting diagram can also be saved under various extensions, such as PNG, JPG, GIF and PostScript. Visual Schema is an easy to use tool, with an intuitive interface, transforming the chore of creating a diagram in a simple step-by-step process. The software prompts you to choose the type of Database used (MSSQL, Oracle, MySQL, MS Access, etc) and then select the file from your directories. You can also input the diagram title from the same window and select the output file format desired. The app enables you to customize the format of the diagram by offering you several options (Full, Table name only, Table name with PK), picking out the font style, size and name. While not many, the customizing options are enough to satisfy the basic common needs. The resulting diagrams look clean and well organized, despite the high number of tables that resulted from some files. All in all, Visual Schema is a nice and efficient piece of software that looks to illustrate databases as cleanly as possible. The software cuts down the time needed to create such a diagram to the minimum and the resulted illustration look efficient.

Visual Schema With Serial Key

Visual Schema is a tool to create a graphical representation of the structure of your database. Take your database, choose the type and format of diagram you want, and Visual Schema generates it. It supports SQL dialects such as Oracle, MSSQL, MySQL, MS Access and others, giving you the opportunity to obtain a great and comprehensive diagram. Visual Schema is not limited to the structure of a database but can be used to illustrate many other types of data: Data Base Diagram. The database tables and columns, views, stored procedures, triggers, etc are all put in place for you to illustrate it on the screen. The software is not only used to build a graphical database diagram but also to produce an array of diagrams that allow you to view the database from different aspects and have easy access to the structure of the database: Rollup - This shows you the structure in a summary manner (with just a list of tables), a general overview of the data base. Tree - The structure of the database is shown in a tree format. Table/Column - This shows you the structure of the database as a table with all the columns (also known as a table diagram). With the Rollup option, you can also use the Filter command to find the tables/columns that you wish to visualize. When you click on a table/column, Visual Schema will only show it and all the other tables and columns that it depends on. In the rollup mode, it is possible to customize the data to be shown by clicking on the plus, minus buttons next to the table. This operation adds or removes tables/columns from the rollup. Multiple diagrams Visual Schema allows the creation of multiple diagrams by passing a directory or folders containing a large number of tables and databases. All the diagrams produced by Visual Schema can be managed in a single window: you simply choose the folder you want to load, then the operations you wish to perform (Show/Hide) are done. From the left, the operations are: Show Folder Hide Folder Show Selection Hide Selection Generate Diagram To make these operations effective, you can choose the menu's: Show/Hide With the Show/Hide option, you can choose either all or part of the diagram to be visible or not.
