Not to be confused with Photoshop Elements, a program designed to introduce Photoshop, Photoshop Elements is a free version of Adobe's full-featured photo management program Photoshop CS4. Beyond the basics of the tools Many Photoshop tools are assigned to a button on the toolbox, but you can access several of the more commonly used tools via menus and commands. Here are some of the tools you use most often: Keyboard shortcuts Selection tools (Camera Raw, Curves, Paint Bucket, etc.) Layers Transform Paint Bucket Grid Shadows/highlights/levels Adjustments Gradient White-balance adjustments Cloning Quick selection Filters (see the box on the next page) Layer Masks (see the box on the following page) Brush tools Smudge tools Charcoal tools Tools for creating and customizing brushes Design tools Adjustment layers Eraser tools Highlight eraser tools Lens Correction tools Gradient tool Path tools Free Transform tool Cropping tools Image as a pattern Table tools Freeform quilting tools Mask tool Hierarchical selection tools Exporting (see the next section) Print, Web, or email previews Image compression Retouching tool Animate Adobe Bridge Adobe Elements Adobe Premiere Elements Adobe After Effects Adobe Encore Adobe Media Encoder You can configure shortcuts in Photoshop's Options/Shortcut tab. This is where Photoshop presents dialog boxes for applying shortcuts. In addition to keyboard keys for certain commands, you can also apply shortcuts to menus, windows, and toolbars. Select a Toolbar via: To the right of your toolbox, click to display a menu that lists all the toolbars with their buttons. Choose a button and drag it to a spot on your desktop (next to the artboard or the layers) to create the toolbar for that button. To select the main toolbars, click on the toolbar to activate it. To add/remove toolbars, choose Window/Toolbars. Then click the Add button, or drag a toolbar tab onto the panel. You can name each toolbar tab by clicking on the name before choosing OK. Q: SharePoint Web Part, how to display list of items from SQL Server I'm new to SharePoint, but I need to get the list items from a table in an SQL Server database. I don't need to pull down all the items at once, but I need to display a small list of items in a web part. I assume I need to use a Feature Receiver to work with an event handler or to use a query string to pull the items, but I'm not sure what to do. I know I need to get "display data", but I can't figure out what type of query to use in the event handler. Any help will be much appreciated! I have read this SO post and I am aware of the basics of web parts on SharePoint. I just can't figure out where to put in a query to get the list of data I need. A: If the list is not in the central farm. The best you can do is put them in a list form in a document library, and make that part a Web Part. Then you use the ListItemCollections Web Part to display that list. It is hard to say if it will solve your problem if its a single value per item. If you have a list which is dynamic and you query the server for each item, you have to use the Client Object Model. If it is a static list, which I assume, you can use the server object model. If you can use jquery in your event receiver, take a look at the \$.ajax call, and the function getData(). The event receiver will fire for a few different events that will allow you to query using the client object model, and for the object model, follow the documentation. /* * Copyright (c) 2018-2019, Arm Limited and affiliates. * SPDX-License-Identifier: Apache-2.0 * * Licensed under the Apache License, Version 2.0 (the "License"); * you may not use this file except in compliance with the License. * You may obtain a copy of the License at * * * * Unless required by applicable law or agreed to in writing, software * distributed under the License is distributed on an "AS IS" BASIS
