Autodesk Alias 2018 A: As I searched for this my self in google I thought that it might be helpful for you to answer this question. Autodesk Alias is a useful and famous software that is used for CAD drawing and modeling. Although it's obvious to use the online version it's better to use the standalone version. As the standalone version is for computers it can be downloaded from this site. I hope this would help you! Q: JQuery Ajax Request Returning Plain Text I'm using JQuery Ajax to send an HttpPost request to a Web Api, and I have no problems with the code, however, when the controller receives the request, it has the following parameter: Parameters: {"productId" : 1} instead of the JSON I would expect. Is there something I need to be doing to set this up? A: You need to set the dataType parameter in your ajax call to "json". It defaults to xml. If you don't specify one, it will use xml by default. Q: Can I change a Google Apps Script webapp by commenting out some of the existing code? I have a Google Apps Script that I use to call a web service and extract data from it. It's a pretty simple app, and I'm now adding new features in a new Google Script. I want to write unit tests for the new features, which means first checking if the new code works as expected without running any of the original code. To that end, I think I'll try something like commenting out the existing code and see if it still works. I know that this won't work as is, since the app won't find the required web service and the app will therefore be unable to function. Is there some way that I can comment out some code, and still have the app function? If not, is there any way that I could make a copy of the app first and then comment out the relevant code? A: Yes you can. App scripts are structured as one script-element inside one app.gs file. The app.gs file contains the scripts and the logics, while other *.gs files are html/javascript files. The files are independent. All the files, which have.gs extension, are treated as scripts when viewed from the script editor. In 1cb139a0ed
