Future AutoCAD 2019 will be backwards compatible with 2018 releases. A future release is planned in 2022 for introduction in early 2021. AutoCAD has evolved since its release for Microsoft Windows with each release. Windows is expected to remain the primary platform for AutoCAD until 2022 when the first release of AutoCAD to the Mac platform is expected to be introduced. In November 2017, reports stated that Autodesk had been approached by at least five companies that were exploring the

possibility of developing a Linux-based Autodesk product. The Autodesk Architecture 2019 package (formerly named AutoCAD Architecture) has been discontinued and replaced with Autodesk Revit 2019. Versions for Microsoft Windows, macOS, iOS and Android operating systems were later added. AutoCAD LT's system requirements at the time of its release were the following: Microsoft Windows Intel Pentium II or AMD Athlon 64 processor (2 GHz recommended) 384 MB RAM (512 MB recommended) 2 GB free hard disk space At least a 3-gigabyte HD DVD drive (or equivalent) An operating system of Windows 2000, Windows XP, Windows Vista, Windows 7, or Windows 8 Internet connection In 2007, the LT series continued to support a Windows XP platform with 32-bit versions. However, in 2011, support for Windows XP was discontinued and all LT products required a Windows 7 platform or later. In 2011, the LT series was enhanced with a new capability called 3D Warehouse, a1d647c40b
