Unlike other graphics software programs, images saved in Photoshop format are only image files, which means you can open them on other computers, but they don't include a program that may enable you to interact with the file. For example, if you open a photo in a word processor such as Microsoft Word, you may have to adjust the color, and you don't have the "Photoshop look" to the picture. When using other software programs, be sure to save the image as a JPEG file to retain the Photoshop look. Figure 3-2 shows a window in Photoshop with the information for a person's portrait taken from a scanned picture using a home inkjet printer. **Figure 3-2:** Photoshop's features enable portrait artists to create the required images for portraits. What's a Raster File? This term, raster, is a graphic file type that's an image. A raster file is composed of a rectangular grid of colors that represent the pixels. Photoshop's file system stores pixel data to create rasterized images. By default, Photoshop saves most of the original image as a bitmap, which is a raster image. A bitmap is a form of digital image that's stored in a digital file. Bitmap images are composed of a grid of pixels that are based on the number of pixels in a particular dimension. For example, 8-bit images are composed of 256 possible colors (that's 8 bits, or eight color states). 16-bit images are composed of 65,536 possible colors, and 24-bit images are composed of over 16 million colors. A JPEG file is one of the most versatile image file formats on the market. It is a bitmap image with a compression format that stores only the image and not the image's information. Images with a JPEG compression format have been the standard for online viewing of the Web for a long time. When creating images in a scan to send to print, you may notice the program saves a JPEG file rather than a bitmap raster file. Keep in mind that the JPEG format can only save about 50 percent of the original picture information. File formats have different purposes and vary in their advantages and disadvantages for different users. For example, JPEG files are great for saving images online because they compress the image and save it in a smaller file size. However, they don't support transparency, which means there is a limitation on the amount of color that can be stored in the file

Adobe Creative Cloud The user interface of the software is based on the same concept as Adobe Photoshop, but lacks some features, such as the ability to batch resize multiple images, more powerful image masking tools and location-based histograms. After 30 days, it renews automatically at the monthly or yearly rate. Adobe Photoshop alternatives The following are some of the most popular, free and open-source alternatives to Adobe Photoshop. Adobe Photoshop Alternatives Free Free alternatives to Photoshop include GIMP, Paint Shop Pro, or more advanced editing software such as Krita. They are not simply clones of Photoshop. They offer different features and are more suitable for different use cases. A list of the most popular Adobe Photoshop alternatives is provided below. GIMP GIMP (GNU Image Manipulation Program) is a cross-platform, freely available, open source and open development software application for image editing. It was designed to replace Adobe Photoshop and often works as an open source alternative. It is free for use, but has a proprietary plugin called GEGL that allows plugins to work with the software. GIMP performs operations that Photoshop does, but the features and tools are less developed. GIMP is not only capable of performing tasks in photography that Photoshop does, but can also do so on both digital and film, and can apply various photo effects. Paint Shop Pro Paint Shop Pro is an Adobe Photoshop alternative, which supports layers, file types such as TIF, JPG, GIF, BMP, EPS, PDF, and more. It has many features that are similar to those in Adobe Photoshop. The application offers a drag and drop, zoom, crop, resize, shape tools, and is equipped with numerous filters and has a preview. It can read and write to a variety of file types and it can also batch-process and incorporate your changes to multiple images. Krita Krita is another free graphics editor that allows you to use its toolbox as a workflow for personal and commercial projects. SACRAMENTO — A \$6.5 million, two-year expansion project is now set to begin work on the flyover bridge between Sacramento and northeast Sacramento. State transportation officials broke ground on the project Wednesday morning. The 22-lane structure will replace the 8-lane concrete bridge that's more than 30 years old. Engineers are optimistic the structure won't need any major new construction for over 50 years. The project will include a system of tunnels underneath the bridge, so that when the heavily-used span is closed for special events, like the state fair, there's no need to divert traffic. It will also include bicycle and pedestrian paths, sidewalks and landscaped medians along the new, 42-foot-wide roadway. The entire project is expected to be completed by 2022. The project is funded by a \$43 million federal grant, with \$26.6 million of that coming from the U.S. Department of Transportation. "This project will be the crown jewel of the new Sacramento River Bridges Project, the largest public works project in the state's history," said Doug Carlson, secretary of the California Transportation Commission. "By serving the iconic Sacramento River and the transportation needs of Sutter's Fort State Historic Park, this bridge will become the people's bridge, connecting the communities of Sacramento, Elk Grove and Davis." "The \$6.5 million of state funds for the flyover are a good example of how our state transportation investment strategy works. We put dollars to great projects like this in every corner of the state," he added. Construction will begin in January and continue through the summer with the aim of finishing the project by summer 2021. The entire Sacramento River Bridges Project, which includes a series of fixed bridges and a connector tunnel, will cost more than \$3 billion. The entire project is expected to take five years to complete.
