Add annotation to your drawings with Annotation Sync and Version Control. Annotation and versioning are now deeply integrated. Use annotations to mark changes between drawings and versions, to mark complex drafting procedures, to mark 3D structures or parts, and to mark objects in your drawing as well as annotations in your paper drawings. (video: 3:55 min.) Improved search for 3D objects. Search for 3D objects, such as footprints or wheels,

and also search for parts. When 3D objects are selected, views and annotations can be added directly. (video: 3:55 min.) Improved layer management. Create, view, and manage layers more easily and interactively. Easily adjust and control your layers. (video: 3:55 min.) Add a local library of symbols to the Symbol manager. Create, edit, and share symbols from your own library. (video: 3:55 min.) Project Management: Organize and monitor your projects

more easily and flexibly. Know exactly which project is being worked on at any given moment. Group related documents together, so that you can check on or edit all the related drawings from a single spot. You can also assign a tag to your project, so you can find all the related drawings. (video: 4:15 min.) Search and tag your data more flexibly. Search your project data for selected text and images. For example, you can find all drawings that

contain a selected text string or even all drawings with a picture of a cat. (video: 3:55 min.) Share your data with colleagues more easily and faster. Send files to colleagues without leaving the drawing. Simply select one or more files, and select Send to. (video: 4:15 min.) Improvements to the right-click menu: Create a temporary layer when making a copy or merge, and make the temporary layer the active layer. Using the Drag-and-

Drop and Reorder tool now updates the active layer when you move the tool. (video: 2:44 min.) Create a separate legend when you select text, shapes, and symbols. You can now create a separate legend for the annotation interface, and create your own custom legends. (video: 1:40 min.) Select a linked template from the right-click menu. Link multiple drawings together and copy templates
