Macro programming AutoCAD allows macros to be built and run in the background in real time without the need to draw every change. Applications with macros can have keystrokes, mouse actions and commands run while a drawing window is open. This allows a user to interact with a drawing while another drawing is active, and can be used for capturing user actions and modeling them in an application. There are two types of macros: created by the application and a user-created macro. Macro programming allows a user to automate complex drawings with a few lines of code. AutoCAD also supports programming in Visual Basic for Applications. In AutoCAD 2004, macros can now be programmed in Visual LISP. In AutoCAD 2006, macros can be programmed in Visual LISP, Visual Basic for Applications, VBScript, ObjectARX or AutoLISP. With the addition of the 2008 release of AutoCAD, the Macro recording system is still available through the Database Utilities application. AutoCAD 2012 introduced a number of new programming languages. AutoCAD 2013 and 2014 introduced Visual LISP as a programming language, which could be used to create macros. Extensions Many third party applications and add-ons can add new functionality to AutoCAD. Many of these third party applications and add-ons are available in the Autodesk Application Store. Some of these add-ons are: Applications AutoCAD for Windows and Mac AutoCAD LT (later Windows 2003 and Mac OS X) was discontinued in 2012. AutoCAD LT (LT is for Light-Trac) was the first version of AutoCAD to be available for Windows and Mac. It had similar functionality to AutoCAD. The Mac version of AutoCAD LT did not support layers. The main application program is based on the ObjectARX library, which provides support for plugins. When released, the original AutoCAD LT required a high specification system such as Windows 2000 or higher or Apple OS X 10.2 or higher. AutoCAD 2011, AutoCAD LT 2009 and AutoCAD for Mac 2011 are all based on AutoCAD 2010, and all use the same application program as AutoCAD. The current version of AutoCAD is AutoCAD 2013. The software supports Windows, Mac OS X, and UNIX/Linux operating systems. Autodesk Design Review (ARD) ca3bf1094

What's New in the AutoCAD?

Numerous functional improvements to the built-in "Markup Assist" function in AutoCAD, including: Markups can now be drawn in 3D, which makes it easier to share drawings for 3D-enabled users. The "Add Markups" command now supports negative numbers, allowing multiple marks to be added and edited at once. Support for many more markup file types, including Adobe Illustrator (AI) EPS (Portable Document Format) and the popular DXF file format. The EPS file types support up to 22 features, and DXF supports up to 32 features. Importing CAD models from popular 2D CAD software such as Catia, Inventor, Navisworks, and many others. Importing files from popular 2D modeling software such as 3ds Max, Maya, SketchUp and many others. Much more. Integrated Color Management: With new Color Management features, your designs are now consistent across print and screen. The Display Color Profile option (in Settings/Display/Display/Color) and the COLOR MANAGEMENT feature (in the Windows Control Panel) now provide consistent color. When connecting to a network, your display is now automatically connected to your network color management server and it's configured to take advantage of the newest color management features. Dynamic Graphics: Adobe® Dynamic Graphics technologies are new to AutoCAD and allow you to create dynamic graphics in your design that can be executed via command or script. Using an XAML (Extensible Application Markup Language) script, you can create objects that can be embedded within other drawings and that can be modified dynamically via the Windows Scripting Host (wsh). The new Adobe Dynamic Graphics technology is enabled by default. Support for iPad® and other tablet and mobile devices, including more robust API (Application Programming Interface) support for the device. New function groups: Revit™ The Revit plugin has been updated to support the latest versions of AutoCAD and Revit, and provides improved performance. Support for 2D and 3D drawing (in both Revit and AutoCAD) and 2D views (in Revit only). Terrain The Terrain plugin has been updated to support the latest version of AutoCAD. New command-line functionality: The new -winconsole -noc
