After the Beast of Baja, ADT has responded by releasing the beast of the North West Mountainous Desert, ADT Security Services. Tallone, M., Blanchett, J., Lulley, J., Canis, P. & Lim, Y.K. (2007) Do spicules from moulting 'golden' weasels (Mustela Italia) have the properties of neosilicone? A laboratory study of micro-containers containing golden weasel faeces. Zoo Biology, 26, pp. 355-364 (link) I do love the golden weasel. It has a mischievous character about it and its general lean, mean and furry, but more importantly I love this species is one of the few weasels in the world which is native to Australia. An interesting wrinkle of Australian weasel biology is the annual moulting of the golden weasel. When the weasels are molting, their back fur is a lot thicker and yellowish, and they have an elaborate system of secretions on the skin, which creates a sort of cone-like formation from the body. Last time I wrote about golden weasels, I thought the golden weasels' colouration was pretty spooky in its similarity to that of the

AGW's, and some online discussions have indicated that the two species may be distantly related. I was pretty excited when I saw the bulldog show up in July's Furry Convention in the log: "Where will this year's Furries be next month? You know the story 648931e174

. Visualization inspired by romance novels - pmarreck ====== amid Love this! Funny how random thoughts of flowcharting and making things more organized (like the snapshots!) didn't occur until we'd been making things for a while, at which point we realized what we didn't yet have to make a story on! I also found it fascinating how in the middle I was thinking of this as visualizing the story, so the outlying chapters are indeed dynamic. ------ brett40324 Looks cool! I wonder how it would handle a story that's missing a few chapters. Is there some sort of "no it didn't finish it's chapters" warning? ~~~ pmarreck I'm working on that, the chapter links are early on in the process. I'm planning on being able to tell which chapters are incomplete by having alternate colors for sections of text that haven't been rendered to the final image ------ duiker101 Nice idea, I like the voice of your narrator quite a lot. ------ amelius Not very romantic. ------ pmarreck It's possible I'll redo this as a wordpress theme Q: Xamarin.Android by default assigns System.Threading.Thread.CurrentThread when calling new Xamarin.Android by default assigns System.Threading.Thread.CurrentThread when calling new. This means that any static or instance fields access are not thread safe in app mode. Xamarin Docs The current thread is the thread that executes the current method as well as any methods that it invokes. I feel this is a bad decision because if someone is not using the dispatcher thread thread-safe it does not matter if the code uses methods or static variables, it will not be safe even in debug mode. This is not a big problem because we use reflection to access static fields, and static calls are by design thread safe. Stackoverflow Question I am using Android Studio and have this problem in my code(non-sense): static void Main(string[] args)
