Albert and Otto are two best friends. They live in the forest, and have their own little white rabbit. Albert often draws pictures of the forest. Otto likes to talk to the rabbits. Albert and Otto often play in the forest, and Otto often helps Albert build everything he makes. Albert and Otto have been best friends since forever. More than a simple 2D puzzle game, Albert & Otto has a twist: your character is both the player and the main character, Albert. Instead of having no control over your character, you can physically control Albert's movements by tilting your device. By tapping on different sections of the screen, you'll interact with Albert and his environment, providing the player with a new way to play. Several levels follow a similar pattern: you enter the level and navigate it without letting go of the phone. If you touch a wall, you'll "zoom in" and see the environment around you, but you'll also interact with it: you can push certain objects away from you, and you can stack objects on top of each other. For example, you may stack a pencil on top of a stone. You'll keep stacking things together until Albert suddenly loses his balance. That's when you start tilting your device to try and guide Albert back up to his feet, or to try and avoid collisions with the various objects. Albert has one goal: to save a bunny! Albert will pass through all the different levels in the forest, but he'll run out of energy at the end. That's when you have to tilt the device to guide Albert back out of dangerous situations. You might even have to pass a little skill test before you can progress to the next level. An interesting 2D puzzle platformer developed by Gam3tic, Albert & Otto is already available from the Apple App Store for free. Albert & Otto is due out this summer on Android. ]]> New Video Game Examples of Hexis Game Engine

## What's new:

**VK-Babs Crossbow** The VK-Babs Crossbow was a bolt and bow crossbow distributed by Scenner for use with their VK85 and VK100 carbines. History The VK-Babs Crossbow was patterned after the Zvezda Protected Firearms SV-1 (ЗВЕЗДА, in Cyrillic). Both firearms were developed to a higher specification, for use by the nascent Special Forces (meaning Soviet soldiers trained to support the KGB and their successors, the FSB/FSO, intelligence services). Subsequently, the SV-1 was issued to civilian citizens in small numbers; for the first time they were widely adopted by civilian hobbyists. The Crossbow immediately appealed to keen crossbow hunters, since it sat in a semi-automatic configuration and could easily be loaded on-the-go, making it much more practical than having to continuously reload as when using a traditional bow. The need for a bipod might be cited as an additional benefit of the crossbow, since it could also be used while standing. The rifle was also conceived as a trial. At the time of its prototype's delivery, Scenner were performing trial checks on their new rifle. The Crossbow itself was checked first, the trial being held on live rounds. About thirty shooters, representing eighteen different units, were run through the trial. The test was not only to assess the effective range and power of the weapon, but also to gauge the kit's size and weight. The kit was found to be relatively light; ironically, this was its downside. Not only did it make it easier for an individual to carry the kit, but it also meant that the model was easier to knock over in crossbows such

as the International ZELI crossbow. The VK-Babs Crossbow was to be adopted in August 1975, initially only for a six-man unit, but ultimately the entire corps. However, the adoption of the full force of the corps was held up by its development, as well as the SV-1 (and its cousin the SV-2 carbine). After the adoption of the SV-1s and SV-2s, the deployment of the Crossbow was postponed. It could not be guaranteed that Scenner would be able to manufacture sufficient numbers, so production was limited. A drawback of the bar nature of the stock and forearm would be that the crossbow had little in

The ultimate way to experience the universe of Genesis Noir for yourself... Originally developed and published by Shinji Mikami's company Tango, the critically-acclaimed new entertainment franchise Genesis is now available as a free, self-contained, playable, standalone expansion to both the base game and its critically acclaimed remake, Apella. Divided into four distinct epochs, Genesis reveals the history of the universe, from its earliest beginnings to the current state of humanity. Each epoch is represented in distinct eras of the game's timeline, and the stories of each epoch will be revealed as you progress through the game's episodic structure. Choose the life of a god, a monster, a sage, or a master criminal to live out your destiny in this satirical, occult commentary on the human condition. Genesis Noir is a new original comic book series written by Hitoshi Sakamoto (Macross) and Jiryu Morishima (Dengeki Bunko - Excitebike, Kiznaiver). The story sees humanity take their first trip into space, embarking on a mysterious journey to explore the unknown. Clover Studio's localization of Genesis Noir was chosen as the best fit for its audio and production values. Hand-drawn original art, vibrant neon textures, and a unique musical style set it apart from other games. --- The Story "To find peace, we must first destroy that which divides us..."

**Game Hub Mini Showcase BLIA-SRESA-VGA**In this special segment of Game Hub, I play two of the most well-known games in the series, Mega Man 3 and Mega Man 5. I don't share my thoughts on these games, but if you did you'd probably be disappointed. Instead, I talk about the Series Revival libraries that helped get these games out there and into people's hands! These libraries allowed us to play this beloved game series again. I talk about the good and the bad; but mostly I just want to share my love for these titles and how they made me feel like I got extra-special treats.
