However, you can work on multiple layers on a single page. Creating multiple layers can be very helpful in editing photos, allowing you to essentially keep a piece of the original in your picture. Layers can also be combined to produce unique finished images.

should come with one, some extra batteries and a dust cover. Finally, the most important part: the phone. It should be a good phone that you can rely on, and the camera should be a top performer. Your phone should be able to do everything from shooting and editing videos to be playing and listening to music. It's important that your phone is great at all the things you'll be using it for. All in all, pick up your next phone the right way. You'll have some good moments along the way, and one slip-up won't be disastrous. But get good at it, and you can look forward to years of good mobile use. Buying Options There are two primary options for you in the world of Android phones: Samsung and Google. Both companies have been kind to us during the last couple of years, and you'll find some great choices both are for you. Sammy doesn't offer as many Android phones as Samsung, but if your budget won't run you any higher than \$99, Sammy's phones are a great choice. Motorola, after all, is a somewhat larger company that designs its own phones. While Motorola's phones tend to be more expensive than Google's, they're some of the best Android phones out there. For a Nexus-style phone, get a Motorola Droid X. It's incredibly well-made, with a 2.3 GHz processor and a 5-inch super-sharp AMOLED

touchscreen. It's also the first Motorola phone to take advantage of the Droid X name, having a 5MP camera and microSD memory card support. It's also one of the few Android phones you can get with a 4G LTE radio. For something more in-house, get a Motorola Droid Pro. It's slimmer and lighter than the X, and has a 4.3-inch screen that's sharper than even the
