Suicidal Emotions was born out of the desire for Rika's creator, Marco Tancredi, to be able to show his mental illness in a way that is tangible and real. It began in 2006, as an independent game with no publisher or other affiliations. Since then, several years of hard work has gone into creating a game which would bring together his previous experiences. The game doesn't require any learning curve or even much interaction with the player. Simple and clear rules provide the essential framework for the game. The game has a comic visual style because it was a personal desire. The comic style allows for more colors and a wider variety of character designs. Suicidal Emotions is intended as a realistic but absurd story with no serious puzzles and very simple rules. The creation of a playable protagonist allows the most basic plot elements to be explored in a fresh, new light. Suicidal Emotions is a positive experience for the player, as the protagonist also has the option of being a crazy person like the creator. It is a game which we hope will give joy to people who suffer from mental illness. Short videos and various information are provided on our web site (link below). When creating a model in swift, are there any naming conventions for swift? For example, are field names required to be all lowercase (especially for view controllers and.h/.m files), and if so, what other naming requirements are there? If I add a field to a model, do I have to update the model and view controller and/or.h/.m file? A: You are free to name your classes anything you like, you could even do something like (in Swift): public class Person { var name: String! init(name: String) { self.name = name } } But yes, names for properties must be camelCase, so I would recommend to follow that rule for field and method names as well. Another option is to use Swift's Naming Conventions if you want to. Here you can find a full list of all rules Swift follows. I would recommend using that since it's a great way to follow the standard for your code. If you write an extension (or a mixin) for the structs in your app to just add a new property or method to it, you could even use the CamelCase naming convention. In chess chess is easier to play and pose problems for a computer than almost any other human endeavor with only a few exceptions. Think about the number of programming languages, the number of dimensions of art and its possible nuances by everyone, the complexity and quality of music, the long and complicated bureaucratic process of creating films. In chess too, it seems, virtually all human qualities, quirks, foibles, and sometimes even fears and ambitions are reflected in the game itself. For example, one of the most remarkable tests of intelligence is to play a computer and then beat it. Take advantage of the competition and of the interaction at all times. Reason with it. Try to out reason the logic engine. Humor it. Shout out the long hand, grunt or otherwise, emit inflections of your own. But on its own terms. Aim for edge, the supreme difficulty, and only there will you find your own mental DNA. Post your notes on the board. Share the insights that come like lessons learned. The more you can offer others what you know, the more they will sense. Likewise can they share more of what they bring to the table. Emotions in chess can be more complicated and troubling than any other form of business. Higher stakes are often accompanied by lower levels of rationality. Directors must be more careful how they use actors if the game is as challenging as the theatre. They can't deviate too much or they lose control of the production. Likewise computer chess has many pitfalls. Albert Einstein said: Everyone is constitutionally insane. Playing chess on the computer can be very simple if your basic moves, opening lines, and endgame patterns are programmed first. This is both a blessing and a curse. On the one hand there are hundreds of possibilities. You can scan a line in 5 moves. You can take a random file each move if the board agrees or just accept a random empty line. On the other hand, there are hundreds of possibilities for a mistake and no easy way to test them. If you have supercomputer power that's only half the goal, though: . Toss your net a dozen of worms Allow that each maneuver's reasonable on its own merits. Toss the game's possible permutations at the board, and watch

Realizing this post is too late for the PC's to download, I'd like to mention that this is a fun and entertaining game to see on the Big Screen! If you're interested in watching a playthrough of the game, I'm posting a Youtube video I made last week to showcase the game better. Hey, does anyone know of any cheap games, like maybe ones you play on your home computer, that could be downloaded to the PS3 for $1? I was thinking about getting one for $30, but was wondering if there were cheaper cheaper alternatives out there. Any thoughts? A bit late in the day, but one can download these free games: You also have God's Will: Forsaken Souls (a Flash game) and Run With The Night (a free FPS). Also, for $1, you can download the English demo of the 2nd Castlevania game, Curse of Darkness. All you have to do is go into the PlayStation Network Store, search for "Curse of Darkness," and find the demo.

Newton Going Home TrailerLived in state prison last year Family name, Delgadillo, is common in California; currently incarcerated in San Quentin. First Contact: January 22, 2013: Black eyes, missing teeth; wears glasses; has tattoos on top of a large scar just above his right eyebrow. Mildly disheveled, but not dirty or obviously unkempt. He speaks Spanish. He says he was placed on death row for the 2002 slaying of 51-year-old Shawna Forde. "Nothing more or less than they were supposed to do it," he says. "They did their job." He explains that after he was found not guilty of the murder by reason of insanity, he was sent to the California Men's Colony, a state psychiatric hospital. Later he was sent to San Quentin state prison, just for medical reasons. He says he was moved around a little, spending time in Placer County Jail and being taken to other hospitals. "Eventually I started doing a little time here, so I haven't had the pleasure," he says. When there, he says people get an ID tattoo on their arm, so they can move up the food chain, a little job for them, if you will. Delgadillo says he spent just under a year in prison. He declined to give his age. Then, in November 2012 he was removed from the state hospital and sent back to prison, where he stayed through June 2013. How the whole thing started he describes as emotional. A prison
