What is it? TaskArrange is a Windows application designed with a single goal in mind: to help you rearrange the buttons displayed on your taskbar. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to arrange the Windows taskbar buttons on the breeze, without having to go through installation steps. Minimalistic looks You are welcomed by a clean feature lineup that allows you to carry out most operations with minimal effort. There's not much to brag about the user interface, as everything is kept as simple and clear as possible. Main features TaskArrange gives you the possibility to view all taskbar buttons displayed in the primary panel and refresh the current information with just one click. What's more, you are allowed to move the selected button up or down, or jump to the top or bottom part of the list. There's support for only a few configuration settings, as you can make the app remember the window position and change the language of the interface. Basically, it proves to be nothing more than a piece of cake to work with this program, as you only need to press the "Apply" button in order to make the application change the order of the buttons displayed on the taskbar. The changes are applied quickly and the tool remains light on system resources. Bottom line All things considered, TaskArrange proves to be a simple application that comes bundled with several handy features for helping you tweak the buttons displayed on your taskbar. What is it?

Q: State,when you select a specific row in a table jquery Hi i am doing a common problem in jquery and a html table. the problem is that i have a table with all the columns and some rows are NULL the client select a specific row and it updates the cell in a disabled input the problem is that i have to update the other cells and save the other rows in a sqlite database. the user can select a row and with that i update the input field. how can i know which row has been selected and then get the id of this row and update the input fields in the row that has been selected

```
function init() { $.get("../php/functions/select_update.php", function(data) { $(".active1").html(data); $(".active2").html(data); $(".active3").html(data); $(".active4").html(data); $(".active5").html(data); }); $(".active1").change(function(){ $('active1').val(""); }); $(".active2").change(
```

#### What's New In?

1. To view the all taskbar buttons in the primary panel.
