Some of the Photoshop tutorials that are available are rather complicated, but they're also worthwhile if you are just starting out. The first lesson of any basic Photoshop tutorial is that nothing about Photoshop is complicated! Although a Photoshop Essentials training course is recommended by many Photoshop gurus, I don't have any personal experience with one. Photoshop Essentials was created by Adobe to train people in how to use Photoshop. If your company provides this training, or if your technical support staff does, then you'll have no problem finding the Essentials tutorials that you need. The following sections give you a step-by-step tour of Photoshop's interface and features, including which icons represent those features. By the way, when I refer to the three different application panes in the following sections, I mean the Tools, Arrange, and Photoshop Layers panes. The menus you see in these panes are available in each of the Application Pane windows. You can move from one to the other by choosing Window⇒Applications Pane⇒Window.

Starting Photoshop After you open Photoshop, the initial screen provides an online help link at the bottom. You can also click the Help button on the Photoshop toolbar to open a Help screen with multiple topics. If you can't get any help and you just want to learn Photoshop, make it a habit to work through an essential tutorial first. Because the important

features are shown in detail with various interactive tutorials in the training section at

The Photoshop icon appears in the menu at the top of the screen, providing quick access to the most often used features. However, Photoshop doesn't have to be included in the menu to provide access to them. In the future, you may find that you create an icon to the Application Pane or to the Edit toolbar so you have a quick access point to the tools. Be sure to add shortcuts that enable you to move quickly between the available tools. You can also use a keyboard shortcut to call up the tool with a single keystroke, such as Ctrl+T for the Type tool. (The keyboard shortcuts are Ctrl+A for undo and Ctrl+X for redo.) The Photoshop Welcome screen provides basic information about the program. The two features that are most important when starting the

Adobe Photoshop Elements in your inbox! Top 5 Features you should know about Adobe Photoshop Elements 2018 Let's take a quick look at the top 5 features to know about when using Adobe Photoshop Elements 2018. 1. New Organizer The new Organizer feature uses cloud-based technology to store your files, and provides many enhanced features to speed up the editing process. Elements now has an easier, smoother user interface. For example, you can now view one image at a time and zoom in on any part of the image. The new Organizer feature groups your files by their type, such as BMP, EPS, TIFF, JPEG, or PDF. This is great if you have a hard drive full of files and want to organize them. 2. New Organizer Let's say you're working on a high-resolution image

Q: Free disk space as  $f(t) = \int_0^t (1+e^s)^t \over t} ds$  It is asked to show that  $f(t) = \int_0^t (1+e^s)^t \over t} ds$  if  $f(t)$  can be expressed in the form of  $g(t) + h(t)$  where  $g(t)$  is a term which depends solely on  $t$ , while  $h(t)$  is a term which depends solely on  $1+e^t$ . This problem came up while computing the limit of  $\int_0^t e^{(1+e^s)^t} \over t} ds$  as  $t \rightarrow \infty$ . The answer is given by  $f(t) = \int_0^t (1+e^s)^t \over t} ds = \{1 \over t\} + \{1 \over t\} \int_0^t (e^s)^t \over s} ds = \{1 \over t\} + \{1 \over t\} \int_0^t \frac{1}{t} \left( (e^s)^t \right) ds = \{1 \over t\} + \{1 \over t\} \left( \log \log t - \log \log \log t \right)$  But how does one see this? Especially the very last step? A: It comes down to:  $f(t) - 1 = \int_0^t \frac{1 - e^{-ts}}{t} ds$  and after a change of variable  $x = e^s$ , we have:  $f(t) - 1 = \int_1^e \frac{1 - x^t}{t} dx$  Hence,  $f(t) = \int_1^e \frac{1 - x^t}{t} dx + 1$ , and obviously, as  $t \rightarrow \infty$ , the dominant term is the first one. In order to justify the last step, we can use the same technique than in this question. Namely, we have:
