History AutoCAD was developed in 1981 by Alain Gheerbrant for GCT, a small company in Strasbourg, France, whose mission was to produce high-quality, professional-quality software for surveying, drafting, and graphics. Gheerbrant designed the first release of AutoCAD for personal computers, running on a Compaq RTc microcomputer running CP/M-80. At the time, the BASIC interpreter had to be run from RAM, and some of the early AutoCAD models were released with the memory exhausted, requiring users to start the program from the secondary drive, a technique used on many CP/M-80 computers at the time. The first release of AutoCAD, called AutoCAD 0.10, was released in 1982 as a desktop app running on a Xerox 820 microcomputer running CP/M-80. In the first years, AutoCAD was bundled with a drawing tablet, a bar code scanner, and a Teletype Model 33 telephone modem (later replaced by a General Instrument 56k modem) to connect to a mainframe or minicomputer at a remote site. In 1984, Gheerbrant was approached by a Danish company called Data Design A/S (DDAS) to help in the development of a graphical CAD program. Gheerbrant worked on a new version of AutoCAD, but he was fired by DDAS and replaced by Ron LaFon. Ron LaFon developed new tools for AutoCAD, including the use of the Z-buffer to present a translucent display of the computer screen, allowing the user to work with partially visible objects. The pen drawing tool on the original 1983 version of AutoCAD was replaced with a mouse. The first Windows version of AutoCAD, 1.0, was released in 1985. In 1986, DDAS made a deal with Borland, Inc., a young software company with a PC-DOS and MS-DOS platform for its development tools. The Borland team visited the GCT office to take a look at AutoCAD 0.90, the latest version of AutoCAD for the CP/M-80 platform. Within a couple of months, they had finished an MS-DOS version of AutoCAD. Borland offered to buy GCT, but Gheerbrant said no. Borland had no intention of creating a competing product, so Gheerbrant agreed to

Dr. Steven Hoefflin was on a panel of defense witnesses during the inquest into the May 2009 death of the King of Pop when he became locked in a dispute with the King of Coroners' court and was ultimately ruled in contempt of court, according to NBC4 in Los Angeles. Coroner Investigator Armando Garcia questioned Hoefflin about what type of payments he received from Jackson's personal physician Dr. Conrad Murray. Murray was convicted of involuntary manslaughter for allegedly giving Jackson powerful sedatives that led to his death. Hoefflin repeatedly answered the questions "I don't recall," instead of providing a specific answer, according to NBC4. Judge Michael Pastor later ruled that Hoefflin was in contempt of court, finding that his refusal to answer questions amounted to perjury. Prosecutors said that Hoefflin's refusal to answer questions was a "deliberate attempt to impede" the investigation into Jackson's death. Hoefflin was also found to have lied to the California Medical Board when he claimed that he was never convicted of any criminal offenses. An emergency hearing for Hoefflin was scheduled for Dec. 17, but he has yet to respond to the contempt charge, according to a report from the Los Angeles Times. Jackson died at his home in Holmby Hills, Calif. on June 25, 2009, after being found unconscious by a tour bus driver. In the wake of the singer ca3bfb1094

The peptidoglycan-binding proteins of *Clostridium perfringens* are believed to play an important role in the initial interaction of the bacterium with the host. To evaluate this, the ability of the clostridial peptidoglycan-binding proteins to bind to the muropeptides of the *C. perfringens* cell wall was assessed. The binding of purified peptidoglycan-binding proteins to an muropeptide-containing chromatography column was compared with the ability of whole cell suspensions of *C. perfringens* to bind to the same column. At lower levels of ionic strength, the purified proteins were unable to bind to the column, but when *C. perfringens* was added to the column suspension, the proteins were readily detected. A similar dose-dependent binding of whole cell suspensions was observed. These results suggest that, at physiological concentrations, the peptidoglycan-binding proteins are involved in bacterial binding to the peptidoglycan of the *C. perfringens* cell wall. In the 1840s and 50s, the Bible was the most important source of knowledge for law students in the United States. As today, they were taught in law school from the language of their religious beliefs. Law students, especially those from the lower and upper middle classes, were taught that the law emanated from the Ten Commandments and the teachings of Jesus Christ. They learned that there was one way, written in the Bible, to understand the law. And it was a way that required them to serve Jesus. This was the case in the early days of law school. But that all changed, perhaps slowly at first but ultimately decisively, when law schools began teaching the law from the perspective of the American legal tradition. This was the case in the United States by the beginning of
