Q: Updating new content with ajax I have an index page and a user area page. The user area is being loaded using ajax after a button click which changes a hidden text box to the user area. The issue I'm having is that I have a drop down list that is populated by the user's posts, which is displayed in the users area. Currently it pulls through all the posts. I only want to pull through a limited number of posts that relate to the user the currently logged in. How can I make this work? Do I need a separate query? Thanks in advance! UPDATE: JS: $('.MyDropdown').change(function() { var cid = $(this).attr('id'); $.ajax({ type: "GET", url: "?get_posts", data: {cid: cid}, dataType: "json", success: function(data){ for (var i = 0; i ' + item.post_text + ''); //collapse dropdown $('#collapsed_posts').show(); } } }); }); HTML: HTML for the textbox:

Here are a few tips and things to know before you begin. - For professional editing, I highly recommend using Adobe Bridge (launched in Photoshop CS5). It allows you to organize, preview, and manage a large quantity of images quickly. You can drag and drop the files into a Workspace, or add new ones to a collection. - The most common brushes in Photoshop are the Pencil, Paintbrush, Inkwell, and Airbrush. You can change the size, hardness, type of tip, and opacity of a brush. - You can paint a selection, which will make a copy of the objects inside the selection. You can then use that selection to mask parts of the image. - The erase tool (Eraser) is great for erasing text, photos, and logos from images. You can even mark areas of the image as areas where no eraser should be used. - The Eyedropper tool can be used for sampling colors in your image. The Toolbox icon in the far right of the screen will show you every type of tool and associated Photoshop menu. In the left-side toolbar, there are several other tools that you can use: The Rectangle tool, the Free Transform tool, and the Straighten Tool. - You can use the Rectangle tool to draw a box. You can also quickly get the pixel position of where the box ends so you can copy and paste. You can also use the Ruler tool to show you where you are on the canvas. You can zoom in and out using the zoom tool. - The Free Transform tool lets you stretch, rotate, and resize any object on the canvas. You can also reverse the effect and flip it in a mouse click. The Toolbox icon can be dragged over the image and shows you where you can use it. - The Straighten tool can help align the edges of a picture, especially if the edges of the picture are warped. You can also click a point on the canvas and drag it to a point on a picture. This lets you align the picture to the pixel grid. Here are a few common Photoshop keyboard shortcuts. To see more, take a look at the Photoshop shortcut menu at the bottom of the screen. You can click on the lower-right corner of the screen or use the keyboard shortcuts. - CTRL+A - Deselect all or select all. Note that it doesn't start on the top
