Orban Opticodec PC 2.0 Build 7- Multimedia-Publisher-0Great Barrier Reef's Great Adieu On Saturday, Oct. 1, 2011, the world got its first glimpse of the new Great Barrier Reef. Sunset on the world's largest living structure, the Great Barrier Reef, from the 2012 yacht race. Photo Credit: John Frederick In case you haven't been paying attention, the Great Barrier Reef has been under threat for quite some time. The Great Barrier Reef Foundation's renewal of The Great Barrier Reef Marine Park Authority's Environment Plan in 2010 placed additional conditions on industrial activity. Unfortunately, this included

placing restrictions on any new port expansions at Abbot Point near Gladstone, which is the port that is currently handling 80% of the coal mining in the Gladstone Port license area. It also placed restrictions on the number of new port license areas in the Great Barrier Reef Marine Park. It wasn't just the coal mining associated with Abbot Point that the new regulations were targeting. The rules also restricted dredging and created substantial environmental conditions for any other port expansion. By placing these new conditions on the Abbott Point dredging and port expansion project, the government was effectively preventing any new port expansion or expansions of existing ports. It is important to note that the government has never said that it is actively opposing port expansions, but it is simply presenting a very tight set of environmental conditions, most of which would effectively prevent expansion. The government has set some very restrictive conditions for port expansions including, among others: New port expansions Dredging expansion How much can be transported

Where it can be transported How long it can remain there What types of construction can be used What types of industrial products are permitted A number of major industries are working hard to find ways around these restrictions. For example, many have investigated taking existing port licenses and expanding them. How would you like to take the permit for Gladstone harbour and expand it to port the country to include billions of dollars in new industrial activity? Perhaps you would like to acquire the port permit for Gladstone and expand it to include the multi-billion-dollar expansion of fertiliser and coal production? If so, then you are going to need to go through a major lobbying effort. The government is not going to be able to say no to any requests like that. In
