There are 2 types of CAD systems: Browser-Based, and Integrated - these are the ones you will see us offer as solutions. They are labeled as Browser-based CAD system when they are browser based (such as Google SketchUp), and Integrated CAD systems (such as Adobe Inventor). Browser-based CAD systems (Google SketchUp, Autocad, etc.) are usually free to download and use. You need to have a current version of Adobe Flash installed on your computer, and typically an Internet connection, to use these CAD systems. A lot of these software programs have tutorials, online help, and community support to help you get started. Some have customer support if you are not satisfied with the download and use experience. The Integrated CAD systems (Adobe Inventor, Autodesk Inventor, etc.) are more complex. You must have a minimum version of Microsoft.NET Framework installed on your computer. This is a newer technology that needs to be on your computer, instead of the Adobe Flash. Unlike the browser-based CAD systems, these software programs are more expensive. To use these software programs, you will need to pay for a subscription, or pay to have the software licensed to you for use on your computer. They are usually used in large work environments, by large design firms, or commercial contractors. These are software options that can be a better choice when you need to scale your design effort up. We have provided a list of the top ten browser-based CAD systems that we are aware of. These CAD systems do not require an Adobe Flash Player player, and are accessible online. These are not the best CAD software out there, and the reason we have not listed them is because we have not had extensive experience with these programs.
