It includes some of the most popular features of the professional Photoshop including: Editing Images Adjusting Colors & Tonal Values Photoshop works well in a way that allows a non-photographer to use it. It is easy to use and is intuitive. It gives you the tools to make your own images and edit them to your satisfaction. Can I use Photoshop Elements to edit my images? Photoshop Elements is easy to use for editing. The non-Photoshop crowd is also an audience for Photoshop Elements. How to Use Photoshop Elements Select It is easy to select objects and non-Photoshop users do not need to have any experience to learn to use Photoshop Elements. Selecting from a single image or a series of images is easy. In general, selecting an object is the easy part. Once you have selected something from the image you can move, rotate, resize and scale objects. Layers Layers are a way to keep your image organized and safe. It is similar to the MyPage feature of Adobe InDesign. You can create several layers using Photoshop Elements. To create a new layer, just click on the Layers menu, select New Layer and then click OK. New and Rename If you are a non-Photoshop user, you can use the New and Rename functionality to create unique layers. Just type a name in the dialog box and click on OK. You can then select the layer and edit it any way you wish. Artistic Features Artistic Features let you play with the edges of your images. There are several features including: Image Effects: Transform: Erosion and Expansion: Grain: Tonal Effects: Inverting Layers: Use the Clone Stamp or Healing Brush to correct minor image problems. Sharpen and Smooth: These features create the effect of texture and general work with the edges and edges of the layers of the image. Smart Sharpen Smart Sharpen is used to make images better looking and clearer. It automatically adjusts the sharpness of your images depending on the size of the image. New and Improve New and Improve is an alternative to features like Smart Sharpen and Optimize Color. You can use the New and Improve options to enhance a specific object or to remove unwanted objects. 05a79cecff

Q: ReactJS: How to show only a card after click in nested components? I have nested components using ReactJS. The first component is Card and the second is Container. The cards are created dynamically using data from the server. The click-event on the container should show only a single card. The concept is that I want to set a list of objects which all should be in the cards. So only one card should be shown at a time, and the user should be able to change the card. The card is also updating as the events are in the server. This works fine if I hardcode the data, but if it is fetched dynamically it is not working as expected. Only the first card is shown but not the one which has been clicked. Card.js import React, { useState, useEffect, useCallback } from 'react'; import Container from './Container'; import { Cards, CardIcon } from '../collections/Cards'; import './Card.scss'; function Card({ className, id, url, title,...others }) { const [visible, setVisible] = useState(true); const [changeVisible] = useState(false); useEffect(() => { // Send request to server using useCallback }); return ({ visible && } { visible &&

Efficacy and safety of desvenlafaxine in the treatment of hot flashes in women with breast cancer: a randomised, double-blind, placebo-controlled, phase 2 study. Hot flashes can negatively impact the quality of life of women diagnosed with breast cancer (BC) who are undergoing or have completed treatment. Desvenlafaxine is a potent 5-HT_{1D/1B/2} (5-HT receptor) agonist and a 5-HT_{2A} receptor antagonist. In a phase 2 study, a once-daily dose of 60 mg desvenlafaxine (DV) was found to suppress hot flashes in BC patients compared with placebo. To assess the efficacy and safety of a once-daily dose of DV 60 mg in the treatment of hot flashes during BC treatment in a phase 3 study. Women with BC receiving adjuvant or neo-adjuvant chemotherapy or surgery for BC and experiencing ≥ 3 hot flashes a day, despite hormone therapy, were randomised (1:1) to either DV 60 mg (once daily) or placebo for 12 weeks. The primary outcome was the difference in mean number of hot flashes per day between treatment groups in the last 7 days of the 12-week treatment period, based on daily diaries. The major secondary outcome measures were: the difference in the proportion of women with ≤ 1 hot flash per day in the last 7 days and a $\geq 50\%$ reduction from baseline in the last 7 days; the proportion of women who had at least a 1 point improvement on the Kupperman Index (KI), and the proportion of women with no hot flashes, $\geq 50\%$ reduction in KI and/or a KI developmental trophoblastic reduction syndrome in an adolescent girl.
