Cardiomyogenesis is a complex process leading to the generation of multipotent cardiomyogenic progenitors, which subsequently give rise to fully differentiated, electrically active myocytes. The differentiation of cardiomyocytes and subsequent maturation of cardiomyogenic differentiation is initiated by the rearrangement of actin and vimentin cytoskeletons, which are mainly regulated by actin binding proteins, such as α -actinin-2, α -actinin-4, and nonmuscle myosin II. With rapid progress of stem cell technology, the generation of pluripotent stem cell-derived cardiomyocytes from human cell sources has expanded our horizons in cell-replacement therapy and bioartificial cardiac regeneration. Notwithstanding, the incidence of in vitro derived cardiomyocytes is still low, as they encounter several barriers to their incorporation into the recipient heart. Here, we report that as compared

Always Have a Plan Yesterday, in my soul-sucking day job, we had an administrative meeting in which the topic of the day was "guidelines for re-writing a document". We've been asked to provide "clarification" for a certain document that could be misinterpreted or over-extended in their new wording. In this instance, they (my bosses) may end up making a significant change, or at the very least, could make their work life far more complicated. To be honest, part of me is really just wanting to lock myself in a room with a bunch of ice cubes and a bottle of vodka, plug my phone into a charger, and say "BLA BLA BLA!", but I'm not. What I'm really thinking is this; if you have a plan or are willing to fall back on a plan when you're facing a complete shift in plans, that is usually really helpful. If you're setting out to write a book or even get some term papers done, you have things you expect to happen, all the way to the 'When-did-I-have-this-sick-day' most obvious, and you plan how to approach the most difficult parts. Ok, so let's see if I can explain this (to myself and possibly to you). There is a guide to me as a human being. Not just my persona or the things that give me external appearance, but my very being. I'm going to make this extremely simplistic: 1. It is a handbook. 2. If I were to go through all of the sections, I'd end up with a short book, even if the book was one big page. 3. The purpose of these sections are so that I have a baseline to consider. There are different levels of this 'guide'. I have different 'tiers' of this manual. I am familiar enough with these things that I consider myself 'non-

Q: Select a specific item from a nested SELECT statement For a query in the following format how can I just select only the information from a nested select statement when the keys test=2 and status=1 and since it seems there are a few different ways to do this. Thanks! SELECT * from (SELECT `applicants.age` AS `test`, `applicants.status` AS `status` FROM `user` WHERE `user.user_id`='231') t WHERE test=2 AND status=1 A: To select a single row from a subquery you need a from clause that selects just one row. SELECT * from (SELECT `applicants.age` AS `test` FROM `user` WHERE `user.user_id`='231') t WHERE `test`=2 AND `status`=1 Inhibition of gene expression by DNA-reactive agents. The goal of this study is to apply gene transfer strategies to selectively inhibit the expression of biomolecules in mammalian cells. In initial experiments, a tetracycline-regulated gene cassette was expressed from a replication-defective adenoviral vector in LNT-229 human glioma cells. Tetracycline treatment resulted in a dramatic decrease in the level of b-galactosidase enzyme activity to less than 1% of control cells. In comparison, the expression of beta-

globulin was decreased to 5% of control levels
