8. **Open the file in Photoshop, and for the first time you look at this image, zoom in to a 400 percent view.** This step is important. With a 400 percent view, you can see the entire image and any areas that need editing at a level that you may not have previously. Photoshop enables you to correct and edit in many different ways. You may find that you need to crop or resize the image and then place the object in a background or foreground and rotate the image if necessary. You can even layer one object over another or switch the background color to a different one. 9. **Open the Brush palette at the bottom of the screen and click on the Brush tool.** 10. **From the Brush menu, select the Round tip, as shown in** **Figure** **7-9** ** 11. **Deselect the Round brush (by clicking the diamond icon next to the Brush tool), and select a size from the Brush Settings bar, as shown in** **Figure** **7-10** ** 12. **Click in the image to select the area that you'd like to retouch; then start painting.** You can paint over any areas of the image to retouch them. You can also paint in color, blend, and multiply the color to create a beautiful, realistic effect. 13. **When you are finished retouching, move your cursor to the size and position you'd like to see the image back in the 200 percent view.** 14. **To place the object back in the image, press Ctrl+Z (Windows) or Command+Z (Mac OS) and then release it.** 15. **Repeat steps 9–14 for the other objects in the photo.** Photoshop is one of the best choices for retouching images because it's fast and easy to use and you can make it look extremely realistic. Photoshop is a _vector-based_ program, which means that you can draw with the Pen tool (refer to Figure 7-4) to create objects and shapes and then place them in your image. The Pen tool is covered in more detail in Chapter 8. Photoshop's retouching tools are at your disposal, so be sure to explore the application; don't be afraid to play with it. It may take some retouching to get the images looking

Q: this in JavaScript I just came across the following snippet of code from the book "JavaScript: The Good Parts" in the chapter dealing with JavaScript design (pg 128). function MM_swapImgRestore() { var i, x, a = document.MM_sr; for (i = 0; a!= null && i tag is loaded. In what way is "this" used here? I'd be really glad if someone explained me how "this" works in a closure and what "this" refers to in this context. A: It's just a closure, this refers to the window object, as does window.MM_swapImgRestore. And this is a good thing, it means you don't need to add the event listeners to the when you create them. 1. Field of the Invention This invention relates to a novel thermosetting resin composition useful for preparing a photoresist which forms a fine pattern and to a radiation-sensitive composition containing said resin. More particularly, this invention relates to a thermosetting resin composition which exhibits improved sensitivity to radiation having a wavelength of 193 nm or less and gives a pattern of good resolution, and to a radiation-sensitive resin composition containing said resin. 2. Description of the Prior Art Heat-sensitive recording materials conventionally used include those in which a colorless or slightly colored leuco dye is reacted with a phenolic or an acidic substance to form a color and those in which an electron accepting compound is thermally decomposed. Both of these materials are disadvantageous in that their handling is inconvenient, such as the occurrence of background coloration upon storage, their poor preservation stability and their inferior appearance. In contrast, radiation-sensitive materials such as those using photopolymers are advantageous in that only the irradiated area is colored. However, since they lack storage stability and cannot withstand the use of heat and solvents in printing applications, it is difficult to use a common solvent for printing. The fact that this thermosetting resin
