App development was originally handled by Autodesk and was known as AutoCAD/Autodesk Exchange Studio. Autodesk later discontinued development of Autodesk Exchange Studio and rebranded the development process as App Development Studio. Features Interactive AutoCAD and AutoCAD LT support forms, drawing lists, tables, and lists that display data. They can also contain hyperlinks to files or web pages on the Internet. AutoCAD supports the Adobe Flash Player, allowing Flash movies to be displayed. AutoCAD supports PostScript. Although not required to run AutoCAD or AutoCAD LT, it can be helpful. Extensibility AutoCAD supports dynamic, extensible object repositories and content viewer, which allows them to be used to browse various file formats. These include: Programmable Themes Themes, "Themes" and the "Theme Manager" allow for creation of thematic content objects, with a variety of attributes, effects, and visual styles. It is possible to create a grid in a drawing. A grid (also known as a "guide") is a visible boundary that defines the minimum drawing resolution and represents a work area. It also usually represents horizontal or vertical symmetry lines. It is possible to place a legend at any position within a drawing. It is possible to place an image anywhere within a drawing. Automatic AutoCAD 2010 introduces new sections of the drawing environment, such as the dynamic block structure, dynamic constraints, AutoMeasure, and AutoSweep. It is possible to perform various operations on multiple objects at once, for example using move, resize, and rotate tools simultaneously or by dragging multiple items at once on the drawing canvas. This is called AutoSnap or Snap&Drag, and it is only available when snap mode is active (i.e. "Snap to Cursor" is checked). In AutoCAD LT 2010, you can place a single cursor onto the mouse and resize, rotate and mirror the layout of the entire drawing in one step. In the known machine the wrapping arms are driven by the so-called overarm drive which generates the wrapping arms movements in such a way that the wrapping material is folded around a group of products, e.g. a group of pots or bottles, placed on a table surface or on a conveyor belt in such a way that the wrapping material is wrapped around the group of products. A plurality of conveyor belts are arranged below the table surface and in front of the wrapping arms. A machine for packaging products in flexible packaging material is known from U.S. Pat. No. 4,589,619. In this known machine several rows of products are positioned on a conveyor belt or on a table surface. These rows are arranged substantially perpendicular to the direction of advance of the conveyor belt or of the table surface. A wrapping arm performs an oscillating movement in a direction of movement of the conveyor belt or of the table surface so as to fold the wrapping material around the products placed on the conveyor belt or on the table surface. A machine for packaging products in flexible packaging material is known from WO-A-95/35508. In the known machine several rows of products are arranged on a table surface. A wrapping arm performs an oscillating movement in the direction of movement of the table surface in such a way that the wrapping material is wrapped around the products arranged in rows. A folding device is provided above the table surface and in front of the wrapping arm. The folding device is arranged parallel to the direction of movement of the wrapping arm and is used for folding the wrapping material. The known machines are provided with a simple guidance and the products arranged on the table surface are not supplied. The products are placed directly on the table surface or on the conveyor belt. The machines therefore have the disadvantage that the wrapping arms must be arranged very closely to the table surface or the conveyor belt or to the products arranged on the table surface or on the conveyor belt. The prior art machines therefore have the disadvantage that the wrapping arms are arranged in such a way that the wrapping material cannot be folded around the products in a space-saving way.
