[The small immune system syndrome in patients with essential venous stasis]. In a prospective study, serum immunoglobulin levels were measured in 60 hospitalized patients with essential venous stasis (E.V.S.). 29 patients had a clinical diagnosis of idiopathic postphlebotic syndrome. 12 patients had been treated for E.V.S. for one year or more before admission to hospital and had not received any treatment for phlebitis since that time. These data suggest that serum IgG levels might be linked to the pathophysiology of E.V.S. They are the "Ocho Cinco"s, the most prominent cast of Cuban Miamians from a parallel universe.
