present invention  
relates to an antenna  
apparatus using a linear  
array of antenna  
elements, a method of  
manufacturing the  
antenna apparatus, and  
an imaging apparatus.  
In order to prevent  
breakdown of an  
antenna element and  
miniaturize a

---

configuration of an antenna apparatus, it is preferable to use a linear array of antenna elements. This is due to the fact that when an antenna element is miniaturized, the frequency of the antenna element becomes low. As a result, it becomes difficult for the antenna element to generate a sufficient amount of frequency in order to realize a desired radiation pattern. When

---

a linear array of antenna elements is used, a linear pattern of radiation can be provided by using at least two or more linear arrays of antenna elements. By decreasing the spacing between the linear arrays of antenna elements, a linear pattern of radiation having a higher directivity can be provided. As a result, an antenna apparatus having a higher

---

directivity can be  
realized. When two
