! So you can ask and answer your own questions quickly. Plug your driver name into the "Your driver name" box:. And repair your driver (X-Force Driver Repair).. So you can browse and download drivers quickly.This invention relates to a machine in the form of a miniature steam engine for grinding and polishing diamonds. In the manufacturing of most diamonds it is necessary to grind and polish the gemstone to a finish of high accuracy. However, such a gemstone cannot be forced against a rotating abrasive wheel or against a conical rotating abrasive wheel. In the past, a gemstone has been rotated against a stationary abrasive wheel which has an abrasive surface on a wheel face which moves radially toward and away from the gemstone. If a gemstone is forced against a stationary abrasive wheel by rotating the gemstone and rotating an abrasive wheel against the gemstone, damage can be caused to the finished gemstone. Also, in the past, to facilitate the use of a stationary abrasive wheel, the gemstone is rotated and the gemstone is notched so that a diamond at the back of the gemstone is forced into the notch during the rotation of the gemstone against a stationary abrasive wheel. Another problem with a gemstone being ground or polished by such a device is that the gemstone is rotated about its own axis. That is, the gemstone is rotated in the manner of a friction wheel. As a result, a gemstone rotated in this manner can not be readily rotated in a rotation device such as a lathe. One such a prior machine, which is designed for grinding gemstones is shown in U.S. Pat. No. 3,706,914. That machine has a gemstone holder which supports a gemstone which is ground and polished. A wheel and abrasive surface is rotated in a first direction against the gemstone and the gemstone is rotated in a second direction about its own axis as a result of rotation of the wheel and abrasive surface. Another such device is shown in U.S. Pat. No. 1,991,910. That device also has a rotation apparatus which is in the form of a friction wheel which is rotated in a first direction. A gemstone is rotated in a second direction about its own axis as a result of rotation of the friction wheel. Such apparatus as shown in the '910 patent is not adapted for grinding and polishing diamonds which are horizontally disposed during c6a93da74d
