My main reason for wanting to use this mod is because I want to make my own maps, and. Q: What is the purpose of the PSC (Power Supply Controller)? I have an Ah bridge IC called LM3230P which seems to have an output rail called PSC. I can't find anything about this rail in the datasheet. Is it a memory location or is it used for something else? A: This is described in the bottom of figure 4 of the datasheet: So this is a current limiting circuit that is run from the bridge outputs. I think the reason this is provided is because the PSC could be sensitive to large changes in the bridge output currents, rather than the main outputs as shown on the previous page. /\* \* Copyright 2010-2020 Australian Signals Directorate \* \* Licensed under the Apache License, Version 2.0 (the "License"); \* you may not use this file except in compliance with the License. \* You may obtain c6a93da74d
