Although dental emergencies do occur, there is good news to be had. A dentist can usually fix cracked teeth in an emergency and avoid complex

---

issues. Removing the tooth is the simplest treatment that can be done. In cases of trauma or when the damage is extensive, the option of restoring the tooth to its normal state is a

---

better choice. A lot of dentists are also offering the endodontic treatment for the root canal. You can have a general dentist see your cracked tooth, but that is not usually

---

recommended unless you are experiencing extreme pain or discomfort. A dentist can usually identify the extent of a crack and whether treatment is required. Any

---

noticeable cracks around the crown of the tooth may be repaired, although some cracks may never be repaired.

Discolored teeth should not be taken lightly and should be treated

---

to restore their  
original  
appearance.  
Cracks are usually  
repaired through a  
dental crown.  
Keep this in mind.  
One of your best  
ways to prevent a  
cracked tooth  
from getting

---

worse is to  
prevent cracks  
from occurring in  
the first place.

Your dental  
hygiene at home  
is the best way to  
protect your  
mouth and teeth.  
Avoid attempting  
to fix cracks by

---

chewing gum,  
chewing on hard  
candy, or gnawing  
on pencils or hard  
lumps of chewing  
gum. Another way  
to assist your  
cracked tooth is  
by having it  
properly cleaned  
and polished.
