
Getway Raid Recovery **_VERIFIED_ Crack**

i am trying to recover my data i have formatted a 1tb partition where i keep all my music, movies, and documents. i have already downloaded and ran a partition recovery tool and it has not worked. i also tried and spent money for a windows 7 pro recovery disc. i tried to create an other partition from one of the free disk space of one of the existing partition, with partition magic. i remember that i got an error message, so i just canceled the process, and shut down my external usb-hdd. 3 weeks later i wanted some data from that hdd, but i get the following message the disk in drive j is not formatted etc i tried this free ntfs partition repair software, but the software only showed me

```
1 partition boot yes sh 0 ss 1 sc 0 fs type fat 16 eh 85 es 15 ec 1023 rel
sectors 0 total sectors 268435455 the rest is empty.
```

i was afraid to continue so i just pressed exit. i had set up a raid 5 2tb drive and 2 1tb drives in raid 0 on my windows 8 pc. i run a bunch of stuff off this pc and over the past few months somehow the 1tb drive was corrupted the bios recognized it but did not mount it, i reattached it to the raid set up and tried running it it says there was a hard drive not found, tried running chkdsk but it ran for over a hr and completed and the drive is still not mounting. it is running windows 8 and the raid card is a gigabyte 8 pci-x card. it has firmware 2.02.07 and i was not online when it was corrupted so i do not know what happened. i am out of ideas and do not know what to try because it did not just die but had a fatal error. i can not get windows to mount it so i can format it and try that as a last resort, i even tried booting into a linux live cd and repair the raid with mdadm and stuff but it will not mount it either. any ideas??

Getway Raid Recovery Crack

i need to recover some data on a drive, but it's been formatted and i don't know the filesystem. i'm familiar with the data recovery suite 'recoverit' which should work for fat32 and ntfs but i'm struggling to find out if it will work on an empty drive. could you please suggest something else that will recover the data, which is backed up, and will work with an empty drive? i've also read that the drive may

be corrupted beyond repair, which is why it's formatted.

does anyone know how to recover it? recoverit crashes when i try to start it, and i'm

not getting any other recommendations. what can i do? i have a formatted and partitioned drive that won't show up in any system. i

can't get any operating system to recognize it, and i have no way of accessing it.

i have an xp recovery disk, but that won't recognize a formatted and partitioned drive. what should i do?

dear author, my brother was using the computer yesterday and he came on saying that some of the data are lost. i have 2 hard disk in my computer. and the oldest one contained local disk drives c, d & e. e is not the cd/dvd drive. its a normal ntfs partition where i used to save all my data. but after what happened, i cant find any of my data saved in that partition and cant even open it. i tried to recover data using some data recovery software and

even they do not show the disk drive e. so i couldnt recover any. i immediately need a solution for this because all my important data was saved in this disk drive e. when i click on it there is a pop up message indicating that the disk e is not formatted and i have to format it. but i didnt format because i was afraid of losing my data. the thing is my brother formatted the pc and re installed the operating system (which is windows xp were using)

after the crashing
happened. he said before it
happened the processor fan
didn't work and it was
getting stuck time to time
and after he restarted the
pc all this has happened. i
need help from any one
immediately. please
