Hytera Dmr Programming Software 13

Both the keypad software and the listening software are very similar, so either is likely easy to learn for those using a basic PC. There are a number of options available when using the keypad software, including the ability to turn on/off the radio, open the menu, change the display, use the control knobs, set the station current temperature, change the brightness, change the user interface language, enable/disable the alarm, download the latest firmware, read and write the licence and calibration memory, search for repeaters, set up a DMR repeater, set up a DMR or analog FM repeater, view the repeater manuals and view the technical manual (if applicable), check the license history, change the settings of the license, save the repeater, view the repeater log, power up the radio, check the battery status, change the station, change the display options, change the text and symbols, change the language, search for a repeater, set the Current Time and Date, set the station auto power save mode, write the aircraft memory, programme the DMR repeater and set up a contact. The keypad programming software is easy enough to get to grips with, with most of the functions organised into simple to use menus. However, it can be somewhat tedious to work with, especially if you are just dealing with simple changes. The biggest issue with the software, is that it will change the operation of the radio to suit whatever function is being performed. The programming cable is made up of the following components: Lanyard Programming Cable Orange/Black Switch 2nd Switch PC76 PC76 connector PC76 switch Clamp 5ec8ef588b
