When I ran ReFX Venture VST, it only released two voices, and only when the first was muted. I think this has to do with the amount of memory being allocated to it, because I could release a few more than two instruments. - I haven't really heard of anyone else having a problem with this, but my window closes whenever I try to open another instrument track (the ones I hear while playing Vanguard are invisible). Opening the synth's parameters window fixes the problem. After closing the synth's parameters window, my window opens again, but it's not visible this time. (Those are totally separate problems, though, and I'm probably just wasting time here.) Vanguard doesn't offer the most options, but it has good sound, it is pretty easy to use and even offers some good and easy to use tools to create cool effects. If you are not much of a synth-person, Vanguard is great because it offers the most basic functions needed for an electronic musician, it is easy to use, is very stable and has a good sound. However if you wish to go really deep into the software's settings, this plugin is not for you. Overall good plugin to have. First thing I go for.
