### ESFsoft Video Converter Crack+ Full Version Free

ESFsoft Video Converter is a simple-to-use software application designed to prepare media files for playback on iPhone, iPad, iPod, PSP and cell phones, as well as to turn them into regular WMV and AVI clips. It can also extract the audio streams from videos and save them to MP3 (CD or high quality), AC3 or Apple TV-compatible format. The app comes packed with a basic set of options that should not impose any difficulties to users, regardless of their level of experience. Quick install and user-friendly GUI The setup operation is rapid and uneventful. As for the interface, ESFsoft Video Converter adopts a clean look and organized structure, where media files can be added to the task list using the file browser only, since the drag-and-drop function is not supported. Convert in single or batch mode File information includes the name, duration, size, output, progress, current time and output size for each item. Batch processing is supported, which means you can handle multiple media files at once to reduce overall task time. Seamlessly configure settings All you have to do is select an output profile and directory, in order to proceed with the conversion operation. In addition, you can modify the default output location, set ESFsoft Video Converter to automatically look for updates, as well as switch to another language for the UI. Performance and conclusion The app is light on the system resources, as it runs on low CPU and memory. It did not hang, crash or pop up errors, and delivers quality clips pretty fast. On the other hand, it stopped during a batch conversion job in our tests without indicating anything. On top of that, its list of supported file types is very short. Nevertheless, thanks to its overall simplicity, ESFsoft Video Converter can be seamlessly used by anyone for carrying out rapid conversion jobs.Q: Laravel 4 - Calling Controller's method via AJAX from jQuery I'm trying to call my controller's method using ajax request from jquery. Here's my javascript code: \$.ajax({ type: "GET", url: "{{ URL::action('MyController@MyMethod') }}", success: function(data){
