Adobe Photoshop has been one of the most dominant software ever. It has since evolved over the ages and is currently one of Adobe's largest selling products both online and in printed form. Its product strength has helped it become the industry standard. The online market leads the end user market, whereas the print market is joined by other low to mid-range products that are influenced by the online market. With Adobe Photoshop & Photoshop Elements being sold both online and in both printed and paperback format, it has become exponentially successful. Photoshop has also been the first choice design tool for over 10 years. It has since become a major part of the average graphic designer's toolkit, which is something that few other companies can provide. With each new version these tools have been improved along with the 3D toolset, and also added to the electronics side of Adobe Creative Suite. The original release of Photoshop was in 1990 for Mac and released in 1992 for Windows, it has grown to support over 40 different operating systems and over 24 different file formats supported. In 2001 Windows XP was added to the family, and soon thereafter, Windows Vista followed. With the newest version, Photoshop CS7, Adobe has conceived on the newest native GPU API for Windows, or Core Profile. This is a massive process, and competes heavily against Windows 10, which is Microsoft's newest operating system. And with the history of the older native APIs, this new transition from Windows 7 to Windows 10 could be fairly harsh.
