Some clients may perceive hiring me means revealing to all and sundry details of the project or what I've done in previous projects. Before a project starts, I explain to clients the minimum amount of information I'm permitted to use. In reality, I use information very carefully. Not only is this a personal issue for me, but if people had access to all this information, they'd probably use it in ways that harm the clients. I see it as my ethical responsibility. If a client allows me to link to a project online (if I have access to the entire source, they should give me permission), I link to a privacy policy and a privacy statement that explain what the client wants to be done with their images. I also append a disclaimer on their site with information about the odd case of when I use images (by the way, the state of affairs is that I'll probably use it, unless their project is well known and they don't want to reveal a little bit of their identity in advertising). Despite what I do to protect clients, my own work may be viewed by other people. I've already heard of cases where people copy my work by making slight changes to it. There are white hat strategies to avoiding being copied (for instance: if you have a particular style that you're using a lot, make it a trademark - most web browsers give you the ability to pick this when you save a website - although if you do this for all of your styles, you risk being copied by a designer without your permission), but in the end, the reality is that if you're creating something that's popular, people will copy.
