Straightforward deployment and instant access to your GitHub login and repository Although the demeanor of working with GitHub can sometimes be quite meandering and complex, this is surely not the case with this extension. Featuring a simple installation process, which doesn't require any special steps, it's ready to work in no time. Clicking the extension's icon will prompt the GitHub login screen, or, if users are already in a session, their respective repository. For the untrained eye, the'refined' GitHub might not be all that different, but the essence of the changes lies in the details, which we will cover next. Subtle changes from the standard GitHub functionality, which can make a world of difference, even for the non-initiated This successful attempt at optimizing GitHub experience and handling results in users having the ability to tweak the way they interact with the platform, the way contents are being displayed, formatting, or even mark issues or pull requests as unread. Furthermore, just like its Chrome counterpart, the extension adds a useful 'Releases' tab for all the repositories and provides quick editing through a dedicated button. User avatars will be available in 'Reactions' and one can even perform repositories comparisons, thanks to the on-screen, 'Compare' feature. In terms of formatting, differences can now be visualized without the annoying whitespace changes and even the news feed automatically expands when users scroll down. These few changes are just some of the many, which are presented on the extension's page. Enhance your GitHub interaction and overall experience with this handy Firefox extension When efficiency is important for GitHub users who prefer to run their business on Firefox, this extension can prove really valuable. Taking the most essential features and expanding them with even more functionality, it manages to overcome some of the most common issues users keep struggling with, and yields an improved, effective and fun GitHub experience. by Know The Author Whether you are a programmer, designer, or simply a "power user", chances are that you've used GitHub to share, collaborate, and learn at some point in the past. GitHub's simplicity, quick deployment, and intuitive interface are simply outstanding when it comes to the software that facilitates collaboration among developers. The Problem GitHub is a fantastic platform that has been around for several years now, having served the world of open source developers quite well. Updated to be a superior browser extension, Refined GitHub is a full-featured application that provides the ability to interact with GitHub through a consistent interface in a friendly manner. Review: This is a fantastic extension for using GitHub! Using it is so easy, because of the way it makes it so easy to use GitHub. It's just that good! Yama Nangmaya Author at 2013-12-28 03:33:00 Refined GitHub delivers all the features you need for managing your GitHub repositories in an intuitive and consistent interface. Tirasshee Author at 2013-12-26 02:27:00 This is a great browser extension and is worth getting. It allows you to view, sync and organize your repositories from a single browser window. This makes it easy to switch between repositories. You can view what issues are associated with a particular repository, view the history of issues and pull requests, and easily share and view the files in a repository. It integrates with Git for Windows, so you can create, edit and share pull requests in the same way as you would in the command line. It integrates with Atlassian Jira and Confluence to make it easy to work with both products. Most importantly, it's easy to use. You can install the extension without setting it up and configure it to suit your needs, and it is very easy to use the extension even if you are not familiar with GitHub. It's great that Refined GitHub now has a Chrome version as well, which makes it even easier to use. It works with GitHub, Bitbucket and GitLab. There are a number of other GitHub extensions for other browsers, but they are all basically the same as Refined GitHub, so if you already use Refined GitHub, you will have a very similar experience with those other extensions. A fully featured extension that offers all the features you would expect from a GitHub browser extension, with a single, intuitive interface and helpful extra features. View, sync, and organize repositories. Create and edit pull requests. Share issues and pull requests. Preview, merge, and comment on files. View the contents of a repository and its branches. View a repository's history, contributors, and branch status. View a repository's issues and pull requests. Browse the repository and file history. View an issue's and pull request's activity. View, comment on, and send messages to issues and pull requests. View, comment on, and star issues. View, comment on, and assign labels to issues. Integrate with Jira and Confluence. View the contents of a repository and its branches, as well as issue and pull request comments. Update to be a superior Firefox extension, Ref
