Ratings Details Reviews What's New Ratings Details Reviews A calculator with an abundance of features and customizability. Clean and intuitive design Right from the start, you notice that great effort was put into design and function implementation, with a helpful tooltip encouraging you to explore all of its features. Visually speaking, the application is clean and modern, which is surprising to see in an application of its kind. What's more, the calculator itself is pretty compact, with each feature you access triggering a new window you can arrange as you see fit. Most available functions rely on the same input, either generated from the calculator or manually provided. Access to universal constants and custom variables If it's an expression that needs to be solved, this app probably has a feature for it. Needless to say that you can bring up a scientific panel, which lets you take advantage of angular functions and more. Amongst others, a character map provides quick access to constants or variables used in most scientific fields, with a simple press of a button exporting the corresponding value to the calculator. Multiple resources and tools In addition, a small utility gives a helping hand in case you want to better handle a sum of money, with the possibility to calculate several scenarios with a financial and mortgage component. The application is not a basic calculator, but more of an office assistant, with tools for unit conversion, fraction calculus, as well as a tool for plotting graphs based on custom expressions. Every action is kept track of, with a small panel chronologically displaying entries, results and operations, with an option to copy values to clipboard for later use. There's also a wordify component which translates
