Blur tool is one of the most important editing tools for which Photoshop will be without in upcoming releases.

- **Lens Blur:** The Blur tool now has a Lens Blur option which will blur the image based on the settings in the Blur Layer. This feature blurs the image based on a reference point placed outside the photo. There are settings for degrees of blur, the angle used for the reference

point, the amount of blur applied to the scene and the amount of “halo” (brightness and contrast) around the area of blur. You can even change the color of the background by choosing a shade from the Blur Background Color palette.

You can also select pixels in a variety of output patterns, including RGB, CMYK, and bits-per-channel. A single mouse click selects the pixels where you highlight them, and you can move the pixels individually by clicking and dragging.

The Content Aware Fill tool is a super-charged version of the basic Merge tool. When you use this tool, the software will make an intelligent guess about what is inside the image so that it can fill the image.

- **Content Aware Fill:** When you select the tool, you’ll find a set of options. You can choose the fillable area, which is the area of the image you want to fill with the color of the selected area or one of the fill colors. You can choose the fill color from the Fill Color palette or you can use a color by clicking on the color box in the Fill Color palette. You can also choose whether to scrub through the image and fill every area in the image with the fill color, or whether to fill only the current selection.

Your instructor, Tony Tran, is a professional digital artist and Photoshop instructor. He has taught this course in Amsterdam, Germany, the UK, and most recently in New York City where he resides. He has taught this course for over six years and has received a 5-star rating from his past students. Since the course is in French, you'll be working on Linux and Windows computers, but the tutor will also assist in creating the course for Macintosh computers. To get started, you'll need to have Adobe Photoshop CS2 or better, and the latest release of Adobe Photoshop Elements. You'll also need, depending on the version, Internet Explorer 8 or higher, and the latest version of Adobe Dreamweaver. And finally, you'll need to have a graphics tablet, such as a Cintiq, Intuos, Wacom, or similar. Some projects lend themselves to a more methodical approach, which means you're able to work more quickly, whereas some could waste your time and result in a mess that you'll be forced to clean up. The idea is to spend time on your project when you first begin, then use a more methodical approach later.
