Share for Review enables users to send a link with a single click to anyone for viewing. In the Share for Review panel, you can choose:

- How many copies of the current version should be shared: one, 10, 100 or any number to be specified.
- **How long the link should be valid for:** One, two, three, five, 10, or any number to be specified.
- **Send the link by email:** A standard email with the link attached or an email with the brief title of the project as the subject line.

Share for Review is a button that appears when reviewers leave feedback on your document. In addition to clicking on the button, you must also locate it on the Review panel, as shown above. (If you don't see the button, have your clients go to the Review panel and click on Pick a version to open a panel in which you can choose which version to use for review.) Share for Review also makes it easy to save the Shared Link on the desktop, to view it in other documents, or to add it to collections for future reference. For casual users, it offers an iPad Air-like clip display — your users can easily view the link without having to enter Full Screen mode and the app typically reloads the screen with the links it saves, so some users may have a close look at them. And if your users lose that link or the desktop where you shared it, it will be easy to restore. Links are saved without revision history, so automatic link edition is not supported. So you will need to do the tedious task of revising and re-sharing the link.

Now, the most essential step in the painting process is to establish a theme, which establishes the starting point for the theme. The starting point for any painting is usually a preliminary sketch. The second step in the painting process is related to the theme, which is developing a composition. A composition establishes the context, shapes and sizes of the mass of objects found in the painting, and the relationship of the masses to one another as well. The composition is directly related to the theme. But, there are just a few ways to create a painting. Many artists use a direct approach. But others, such as Picasso, use indirect (or abstract) approaches that force the artists to think in a different way and to examine all that they see in their works. This is the third and final step in the painting process - the creative process. To complete the creative process, the artist has to work through a number of different stages, such as planning, sketching, conceptualization and planning, and more. Planning is a major part of the process. This usually encompasses the designer's understanding of the concept, the design of the art, the structure of the graphic design, as well as a process for the presentation of the design. If you are interested in an in-depth look at Photoshop's artistic possibilities, you can learn more about how the process is used at [http://blog.italostudio.com Italo Studio blog].
