If anything, Photoshop is designed to be a workhorse app for photographers. That's why it has an extremely robust suite of tools for editing Raw images, and the same pattern applies to designers. Adobe loves photographers, but not necessarily for creating art. They're all about the workflow, productivity, and efficiency for capturing and editing images. Wow I see! Good point, Dustin. From my own experience as a graphic designer I can tell you, the majority of the images you'll use for design require images from your camera and do not require vector editing.
