I used to use PhotoShop CS3 when it was released and that's when I started using it and I'm still using it today. It has so many features that I haven't even been able to scratch the surface of the features it has. As for the version numbers that have been released they have not made it difficult for anyone to use a software like it. I can't wait for the next version of Photoshop to come out so that I can use all the new features that they have worked on for version 23 & 24. I have used other image editing software companies in the past like the Microsoft kit that is used for making video and graphics. It's impossible to get Photoshop to use on the Microsoft kit so I'm glad that Creative Suite is switching to the Linux license. It takes a lot to be an ace when it comes to a lie and Photoshop is the one of the leading choices of the software provided to the guy for editing photos. I love this program because of the many advanced features and the ability to retouch an image. I've never had a problem with it and I can't even count the number of photos I've retouched with it. Photoshop CS5 is a must. With PhotoShop, you can see just what it is you're putting under the editing. With Digital Lightroom, you are always editing a RAW photo, and have no idea what you're editing until you look at the RAW file, then it doesn't really matter because it's a digital photo anyway. The latest version of Photoshop begins the journey to an even more powerful editing workhorse and more streamlined workflow than is now available. Simplicity, ease of use, and all the capabilities we expect from a major flagship application are now just a download away.
