The program is a software illusion, of course—but an illusion that looks very good. I intend to go over a few points* and draw some conclusions. (1) First of all, it's interesting and refreshing to see that the interface is catching up to the current status of the program itself. I can't say anything about the other programs except for Photoshop (which is actually the only program I really use anyway). But as the interface continues to advance, it will continue to catch up. (2) Some things drift. Others don't change. (3) There's still a limit in that though—the program is still somewhat clunkier and slower than P-Touch. However, Photoshop brushes are still a mainstay of the program, and one of, if not the most, useful features of the program. (4) Photoshop has gone in a new direction with the Smart Source feature. In the past, to get a new look, you had to possess a huge back-catalogue of the various types of source images, as well as their colors, grades, etc. Now, you can look for what's called a "Smart Source" and get the source image you are looking for pre-designed. This new feature is a sort of "One-Stop Shop" for the feature. Try it. You will like it. (5) The new features in Photoshop continue to improve workflow tremendously. Adobe has really taken good advantage of artificial intelligence. The comments in this review very much explain the field in which Photoshop uses this technology. (6) I have noticed that the program's performance has improved. It's certainly not the fastest out there, but it is improving. It still isn't quite up with Apple's Aperture 2. (7) Photoshop now has a completely new companion program, called Photoshop Mix. They recently announced this new companion program to be developed exclusively for Windows machines. It is set to be on shelves in October. And, much like with the Smart Fix feature, it reflects the latest technology. (8) I feel that practically speaking, the program has been altered so that it is not as easy to get the information of when one uses a specific feature and what to expect as it used to be—to such an extent that I find Photoshop annoying to use. But, that's just my personal preference. I'm not saying the information was there to begin with. I'm saying that the information is even more important now that Photoshop has shed the one advantage it had over the others. (9) I am hard-pressed to mention any differences I have observed in this version compared with its predecessors. But just in terms of changes that I have made to the review, I find it to be as I have come to expect of this program. I'm not really sure that I have taken advantage of the new features in Photoshop. I don't often use them. I suppose I'm somewhere between the masses that use this program and the masses that want to create artwork with it.
