The last and the most important issue I want to highlight is with the new content creation possibilities held by Adobe's software. Anyone who has tried it can appreciate that the idea is great, but the implementation is very questionable. Of course, that depends in part on one's sights. If you use the app solely on JPG/DNG conversion and RAW file editing, you will not be a whole lot worse off than you were before. The same goes for converting PDFs to EPS files or while editing the contact sheet dialog. But talking about content creation is when the new and annoying selling points of this app start to come into play. First of all, Adobe is pushing the idea that you can apply filters and corrections right before you save your files. This output is done as a result of users' actions, which makes sense. However, the same idea is also available at the time of the image creation. In theory, you can save your image settings anytime before editing it, even for old files. So once you open an image with a setting that you don't like anymore, you can just activate this button see what happens in the "Custom" tab. Indeed, you can reset your initial settings to those chosen by the app, but it will just apply the change to the original image file. You can also preview your image settings and save them right there, just like you can with the "Standard" tab. Making things even more confusing to users, you can now see the "Custom" settings recorded right at any moment since the last time you saved an image, even if you do not have the keyboard with you. As you probably imagine, this can cause a lot of problems if a user does not pay attention and presses the "Save" and "Save a Copy" buttons at random times. You can also change the "Preserve colors" setting if you want to have more control over the editing process. You can't necessarily trust users to apply any of these settings if they don't understand what they are doing, but if you do, I am sure you will appreciate the extra ability to make your workflow more productive.
