Adobe has a new Cloud Sync feature that lets you, well, sync your projects to the cloud. You can also import iWork files and Apple's own Pages, Numbers, and Keynote files. There's also Darkroom, which is a new adjustment layer that lets you selectively darken an image to create a Vignette slider; a new skinning tool that allows you to edit the skin tones of photos; and a CSS effect that can add dynamic text or shapes like arrows or lines to a photo. Adobe also included a set of new presets called Touch controls that moves some of the tool adjustments to four new control panels, one called Touch, which lets you change image properties like Whitespace and Brightness; Natural, which keeps an image's contrast and hue naturally balanced; Monochrome, which lowers contrast and desaturates the image; and Vibrance, which gives the photo a brighter, more vibrant look. These controls resemble the yellow and red points added to a photo in a Lightroom Library. For example, if you've selected Enhance, the Touch panel will show you the image's Whitespace/Brightness, and the Image > Adjustment panel will show that adjustment's Threshold setting. But the real reason to use the Touch panel is the new and improved interface, which makes it easier to see and use these controls. The Touch panel also has a Hide button, which toggles that panel from the window frame. Another new Control panel has a Rotate function for rotating adjustments, a Flip button that flips vertical and horizontally and an Edit Path tool that lets you add and delete paths.
