Kingsman The Golden Circle Movie Free Full HD. a 3K and 2K movie.Q:
Dryloc and Class Library How can I use Dryloc to implement a very basic class that's only used by a library I'm building? I don't want to register the classes directly in the library or use a ContainerBuilder because I'm not interested in the lifetime of that kind of classes. I just want to be able to use instances without doing anything. As an example, suppose I have a bus. It has a busStopListener, which is a simple interface that defines GetBus and SetBusStopListeners. I will register that interface in my library, I don't care about the lifetime of its implementations. For that reason, I can't use ContainerBuilder, and I can't use Register(...) because the constructor is empty. I'd like to be able to create an instance of busStopListener and pass that to SetBusStopListeners. I've read this answer, and now I can create a class that has the only constructor I need, and I can register it in my container. But here, I'd like to use Dryloc. Here is the code: var container = new Container(new DefaultServerRepository(), new SimpleCatalog("CdRepository")); container.Register(ComponentRegistration.For(typeof(Standarizer))); container.Register(ComponentRegistration.For(typeof(Rule))); container.RegisterType(); container.RegisterType(); Standarizer stan = container.Resolve(); //The following doesn't work. Standarizer stan2 = container.Resolve(); //Trying to instantiate Standarizer Rule rule = container.Resolve(); rule.SetBusStopListener(stan); Is there a way to use Dryloc this way? A: Try registering the Standarizer class: container.Register
