Adobe Photoshop's two Share features continue to work with the latest update. The image review process is a quick one for me. The Stroke feature works as I expect it to. It lets you hit the triangle-like button in the layers panel to add a stroke to the layer(s) that are selected (or drag the path to the layers). You can then choose how many pixels wide the stroke should be, the color of the stroke, and what kind of soft edge effect to include in the path. Strokes are applied to the bottom layer. When you delete the object included in the stroke, the strokes are not deleted, but simply move to the next object. Note that the other Share button function is much more limited, though likely far more useful to many photographers and designers. That button opens the image in the Photoshop Editor. The Last Snap button opens the included Snap Settings menu. Admittedly, the menu is a little cumbersome to navigate, but I like the fact I can make basic adjustment decisions in a single click. The Adjustment Settings button only opens the Snap Settings menu and adds a menu option to the Adjustment tool palette. That button stops the image from falling out of the 3D world. You can expand the 3D tool palette to include the Adjustment Settings, which then includes more options. Note that many of the changes to the Adjustment Settings appear to be limited to the currently active layer. **Settings**
Show UI Toggles the display of a small overlay window with the historic adjustments made to the selected layer. The window is available when you change an adjustment (Increase or Decrease the Brightness or Contrast), when you create a new adjustment (also when you increase or decrease the Brightness or Contrast), if the selected layer is in the 3D view, and when you change the Layers panel display.
